### Introduction

■ Revisit DARTS

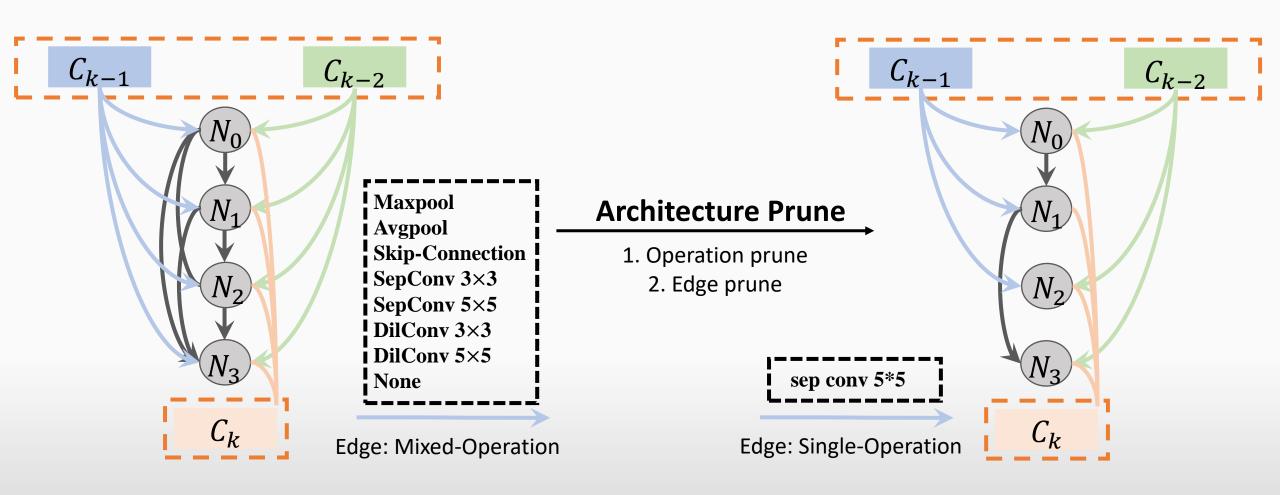

Figure 1. Derive the cell structure in DARTS

### Introduction

- □ Problems in DARTS
  - 1) Select edge based on operation weight (coupling operation and topology search)
  - 2) Handcraft policy of edge numbers (fix to 2)

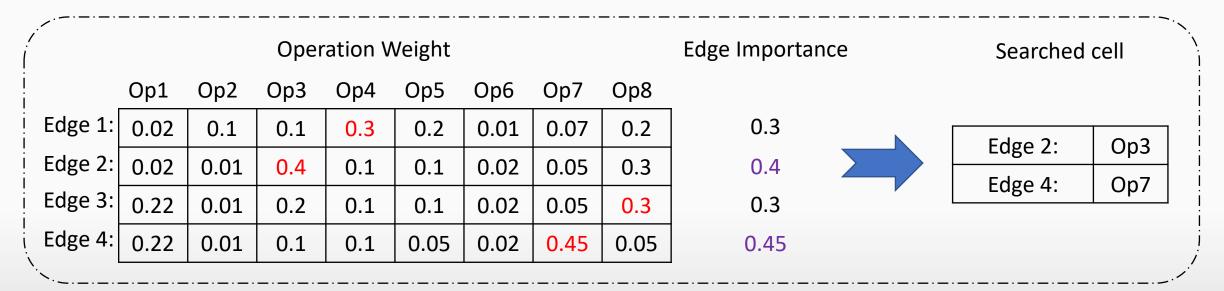

Figure 2. Architecture search via continuous relaxation

### Introduction

□ Can operation weight represents the edge importance?

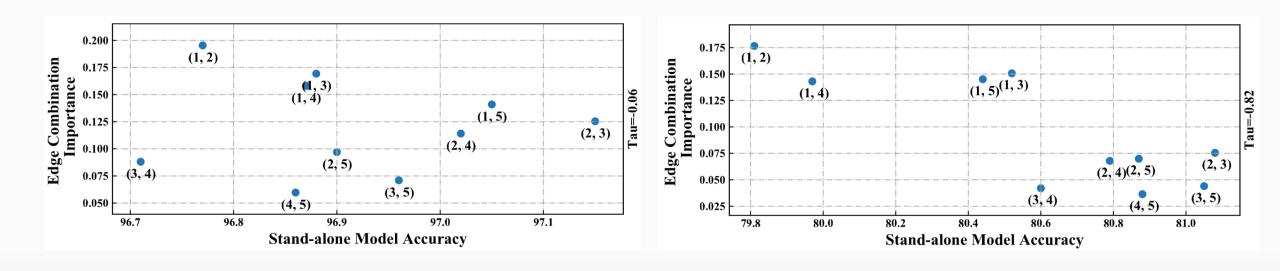

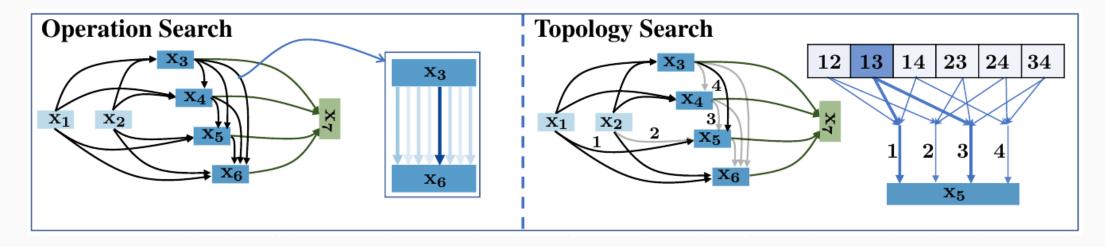

Figure 3. Correlation between edge importance and stand-alone accuracy in DARTS (Left: CIFAR10, Right: CIFAR100)

### Method

☐ Decouple operation and topology search

- 1 Decouple the topology representation from operation weight
  - Relax combinatorial edge selection into continuous
- 2 Decouple the search process
  - Incorporate previous cell-based into operation search
  - Group-based operation search

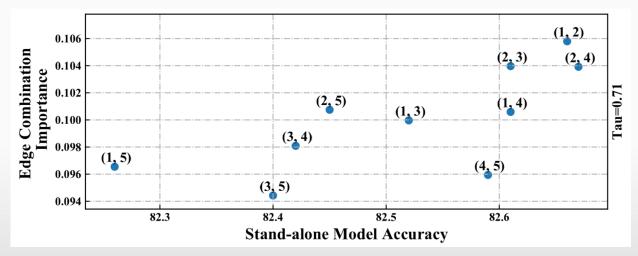

# Method - topology search

#### 1. Define topology search space + continuous relaxation

Two edges (follow DARTS)

$$\mathcal{E}_{x_j} = \{ \langle (i_1, j), (i_2, j) \rangle | 0 < i_1 < i_2 < j \}$$

#### 2. Correlation analysis

#### Any number of edges

$$c_m = \{e_1, e_2, \dots, e_n\}$$
  
 $\mathcal{E}_{x_i} = \{c^1, c^2, \dots, c^M\}$ 

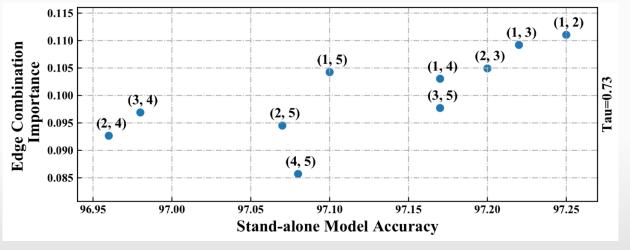

Figure 4. Correlation between edge importance and stand-alone accuracy in DOTS (Left: CIFAR10, Right: CIFAR100)

### Method - operation search

■ Method 1: Incorporate existing cell-based operation search

#### Operation Weight

|         | Op1  | Op2  | Op3 | Op4 | Op5  | Op6  | Op7  | Op8  |
|---------|------|------|-----|-----|------|------|------|------|
| Edge 1: | 0.02 | 0.1  | 0.1 | 0.3 | 0.2  | 0.01 | 0.07 | 0.2  |
| Edge 2: | 0.02 | 0.01 | 0.4 | 0.1 | 0.1  | 0.02 | 0.05 | 0.3  |
| Edge 3: | 0.22 | 0.01 | 0.2 | 0.1 | 0.1  | 0.02 | 0.05 | 0.3  |
| Edge 4: | 0.22 | 0.01 | 0.1 | 0.1 | 0.05 | 0.02 | 0.45 | 0.05 |

Intermediate results for further topology search :

| Edge 1: | Op4 |
